# Status tags used on the labelled frames

| | |
|---|---|
| **[Theorem]** | proved (here or in a cited source); exact mathematics. |
| **[Restatement]** | equivalent reformulation; carries no new positivity. |
| **[Analogy]** | a structural parallel or an identification of a picture element; not a proof step. |
| **[Numerical]** | computed in a TAA lemma; finite-precision evidence. |
| **[Cited]** | a published result, verified at source in a lemma. |
| **[Heuristic]** | plausible reading, not established. |
| **teal box** | resonance-doublet (Breit–Wigner) callout; its tag is printed inside the box. |

Mixed tags read 'A for X; B for Y', e.g. '[Theorem for the conic; Analogy for the link]'. Red vertical line on every disk = the y-axis.
The disks are re-rendered by Grok Bot from the geometry analysed in TAA Lemmas 152–153; J. W. McGreevy's original frames: x.com/McGreevyMD/status/1951
