Stage 2 — Approach to degeneracy

Same conic with a = 4.3 (illustrative), a² = 18.49 < 4q = 20: the lobe stretches toward a line.

F and V: roots of x² − ax + q

[Theorem]

The lobe stretches toward a line

a² − 4q → 0⁻ (still definite)

[Theorem]

Every disk: Critical line (y-axis) · Nested rings (weight strata) · Origin ↔ infinity (the cusp)

Colours = concepts (see legend.png); grey [badge] = status. No null rays at 45° (per J. W. McGreevy); lobes are elliptical conic sections, not elliptic curves.

After J. W. McGreevy's animation 'Flat Potential Oscillations' (Aug 2025, x.com/McGreevyMD/status/1951474097990279331). Re-rendered by Grok Bot from the analysed geometry; not J. W. McGreevy's code. RH is not proved.
